Re: Shredded Redwood Bark

To whom it may concern:

Shredded Redwood Bark is derived from raw Redwood bark ground to size. Redwood bark is a fibrous bark and is stringy in appearance. This bark is an excellent ground cover for uneven surfaces or steep slopes. This product is very popular on commercial projects because it is one of the more economically priced ground covers. The bark complies with the Cal-Trans Standard Specification 20-2.08 Mulch.

- **Shredded Redwood Bark is deep red in color**
- **The particle sizes range from 3 " - 6 "**
- **The average full load size is 120 cy**

Sincerely,
